- INDUSTRIALIZACIÓN.....36 - 66
- EXPORTACIONES PESQUERAS Y ACUICOLAS....67 - 86
- SERIES HISTORICAS.....87 - 92

Introducción:

La Administración Nacional de Pesca y Acuicultura (AdPesca) del Ministerio de Fomento, Industria y Comercio (MIFIC), pone a disposición de la industria pesquera y acuícola, y demás interesados, el Anuario Pesquero y Acuícola 2002. Su publicación contiene los datos más relevantes de la actividad en sus tres fases: a) La explotación pesquera y acuícola que refleja mayormente los desembarques y las cosechas, b) la industrialización en donde se refleja el producto terminado después que ha sido procesado y c) las exportaciones tanto en volúmenes como en valores. También muestra un resumen de las series históricas de las pesquerías más importantes.

Referencia Bibliográfica:

Anuario Pesquero y Acuícola 2002.

Edición y Publicación:

El Anuario Pesquero y Acuícola es compilado, procesado y editado en el Centro de Investigaciones Pesqueras y Acuícolas (CIPA) de la Administración Nacional de Pesca y Acuicultura (AdPesca). Es publicado una vez al año.

Su contenido representa la versión oficial de las estadísticas pesqueras de Nicaragua y puede ser reproducido siempre y cuando sea citada la fuente.

1. Explotación Pesquera y Acuícola:

Resumen:

En el año 2002 los volúmenes registrados de la actividad pesquera y acuícola totalizaron 34,072 miles de libras, con un incremento del 4% con relación al año 2001, equivalente a 1,417 miles de libras. (**Ver Tabla abajo**).

| Descripción | Miles de libras | | | | Variación % | |

1: Incluye costeros y de profundidad; 2: Peso entero; 3: Incluye otros crustáceos y moluscos.

En el 2002, en el Caribe, los desembarques totales registrados de aguas marinas y salobres fueron de 11,851 miles de libras, con un incremento del 3% con relación al año 2001. El comportamiento por recurso refleja desembarques para los camarones litopeneidos por el orden de 4,371 miles de libras, con un incremento del 7% con relación al año anterior. En colas de langosta se presentaron desembarques de 2,839 miles que comparadas con el año 2001 representaron un incremento del 16%. Con relación al recurso escama los desembarques totales registrados fueron de 3,846 miles de libras, un 4% mayor que los del año 2001. Ver detalles en el Cuadro Resumen Comparativo y N°1.1

En el Pacífico los desembarques totales registrados de aguas marinas fueron de 22,220 miles de libras, con un aumento del 5% con relación al año 2001. El comportamiento por recursos refleja desembarques para los camarones costeros de 682 miles de libras, con una disminución del 34% con relación al año anterior. Este año no hubo pesquería de camarón de profundidad. En colas de langosta se presentaron desembarques de 120 miles que comparadas con el año 2001 representaron una disminución del 47%. Con relación al recurso escama los desembarques totales registrados fueron de 7,231 miles de libras, un 22% mayor que los del año 2001. En las aguas Continentales de la vertiente del Pacífico los desembarques totales registrados fueron de 751miles de libras con una disminución del 30% en relación al año 2001.Ver detalles en el Cuadro Resumen Comparativo y N°1.1.

Camarón

En el Caribe, durante el 2002 la captura total incluida flota industrial y artesanal fue de 4,371 miles de libras de colas sin incluir el camaroncillo, que fueron de 573 miles de libras de producto entero. (Ver Cuadro N° 1.2)

Las tablas que se presentan a continuación, representan el historial de la pesquería industrial de arrastre de camarones costeros y de profundidad en los últimos catorce años, lo que nos permite observar en perspectiva la captura, el esfuerzo y el rendimiento para el período, tanto para el Caribe como para el Pacífico.

En el Caribe la captura y el esfuerzo registrado para camarón de arrastre fue de 4,117 miles de libras de colas y 19,668 días de viaje de pesca (DP) para 64 barcos operativos promedio durante el año; lo anterior aportó un rendimiento promedio para todo el período de 65 mil libras y 209 lb./DP por barco. (**Ver Tabla siguiente**). Si lo comparamos con el rendimiento del año 2001 que fue de 59 mil libras promedio y 190 lb./DP veremos un incremento del 10% en la productividad promedio por barco operativo y un 10% en la productividad por día de viaje de pesca. Para mas detalle ver Cuadros N° 1.2, 1.18 y 1.19.

| 2001 | 3,710 | 63 | 19,538 | 59 | 190 |
| 2002 | 4,117 | 64 | 19,668 | 65 | 209 |

NOTA: Incluye la flota extranjera en los últimos dieciséis años.

En el Pacífico, la captura total de camarones costeros fue de 682 miles de libras de colas incluyendo la industrial, la artesanal y la industrial sin esfuerzo registrado. La captura y el esfuerzo registrado para camarón costero industrial de arrastre fue de 674 miles de libras de colas y 3,990 días de viaje de pesca (DP) para 15 barcos operativos promedio durante el año; lo anterior aportó un rendimiento promedio para todo el período de 169 lb./DP por barco. (**Ver Tabla siguiente**). (Existe un componente de 91 miles de libras de camarón

industrial de arrastre que por no tener esfuerzo registrado se detalla en una sección aparte). La actividad artesanal registrada generó 8 miles de libras de colas, reduciéndose con respecto al 2001 en el que se registraron 122 mil. Para mas detalle ver Cuadros N° 1.8, 1.24 y 1.25. En el año 2002 no hubo pesquería de camarón de profundidad. (**Ver Tabla siguiente**).

FAC: Fauna acompañante del camarón.

que nos permite observar con perspectiva la captura por sistema de pesca, el esfuerzo y el rendimiento para el período. (**Ver Tabla arriba**).

En el Caribe, durante el año 2002 la captura y el esfuerzo langostero de la flota industrial registrada fue de 1,411 miles de libras de colas; un 4% más que en el año 2001, con un esfuerzo de 11,941 días de viaje de pesca (DP) para 52 barcos operativos de nasas y 3,431 días de viaje de pesca (DP) para 22 barcos operativos de buceo como promedio durante el año; lo anterior aportó un rendimiento promedio para barcos de nasas para todo el período de 64 lb./DP y 15 miles de lb. por barco; y para barcos de buceo de 187 lb./DP y 30 miles de lb por barco. Para más detalle ver Cuadros N° 1.3, 1.20 y 1.21.

La captura registrada de la flota artesanal fue de 1,427 miles de libras, un 29% más que en el 2001, no se disponen de datos de esfuerzo pesquero sistemáticos que puedan correlacionarse con la producción, ya que esta actividad presenta una alta variabilidad en su esfuerzo.

En el Pacífico la captura de langosta es ejercida por la pesca artesanal, esta fue de 120 miles de libras expresadas en colas, un 50% menos que en 2001. (**Ver Tabla siguiente**). Se caracteriza por ser una pesquería de muy baja intensidad y de alta fluctuación interanual. Ver cuadro N° 1.10

En el país, las variedades de pescado más importantes registradas en los desembarques fueron los pargos, los dorados y los robalos con 3,321, 2,236 y 2,221 miles de libras respectivamente. (**Ver tabla, arriba**)

En el Caribe la captura registrada en el 2002 fue de 3,846 miles de libras, de ellas 3,709 fueron aportadas por la pesca artesanal, 78 mil por la FAC y 59 mil por la flota industrial dirigida. De las 3,846 miles de libras, las principales variedades de pescado desembarcadas fueron por el orden: robalos 49%, pargos 23%, meros 12% y macarelas 5%, el 11% restante se compone de 29 variedades de pescado entre las que destacan principalmente los bagres, las corvinas, los roncadores y los tiburones. Para más detalle ver cuadros N° 1.4, 1.5, 1.6 y 1.7.

En el Pacífico la captura registrada para el pescado fue de 7,231 miles de libras, de ellas 5,357 fueron aportadas por la pesca artesanal, 1,866 mil por la flota industrial dirigida y 8 de la FAC. De las 7,231 miles de libras, las principales variedades de pescado desembarcadas fueron por el orden: pargos 34%, dorados 31%, tiburones 6%, anguilas 4%, peces vela 4%, sardinas 4%, y el 17% restante se compone de al menos 21 variedades de pescado entre las que destacan principalmente las macarelas, las corvinas y los meros. Para más detalle ver cuadros N° 1.11 , 1.12, 1.13 y 1.14.

Procedente de las aguas continentales, principalmente del Gran Lago de Nicaragua, se registraron 751 miles de libras. Todas fueron aportadas por la pesca artesanal. Las principales variedades de pescado fueron y tilapia 49%, robalo 38% el 13% restante se compone principalmente de guapotes y roncadores. Para más detalle ver cuadros N° 1.11, y 1.15.

Camarón de cultivo:

A continuación se presenta el historial de la distribución de los sistemas de cultivo por hectáreas y por producción en los últimos catorce años, que nos permite observar con perspectiva la situación de la camarónicultura en nuestro país. En el año 2002 habían 9,396 hectáreas construidas y aptas para la explotación; de ellas, 5,557 correspondían a empresas y 3,839 a cooperativas.(Ver Tablas siguientes).

| Camarón de cultivo | | | | | |

N/I: No identificados ni por tipo de organización ni por sistema de cultivo.

Fuente: Dir. MVC/AdPesca.

La cosecha registrada de camarón entero en el 2002 fue de 13,425 miles de libras, que comparadas con el año 2001 representaron un incremento del 7%. La productividad global en el 2002 fue de 1,429 libras por /Ha/año que comparadas con las 1,393 miles de libras por Ha/año del año 2001 representó un incremento del 3%. Ver cuadros N° 1.8 y 1.17.
